PROJECT NAME	SKILL / JOB RECOMMENDER
MAXIMUM MARKS	2 MARKS

Proposed solution Templates:

Project team shall fill the following information in proposed solution template.

SL.NO	PARAMETER	DESCRIPTION
01	Problem statement (problem to be solved)	Devise an end-to-end web application capable of displaying the current job openings based on the user skillset. Users must interact with the chatbot and can get the recommendations based on their skills.
02	Idea / Solution description	The user can get the job recommendation via notification by providing the info in portal that simplify the searching process. By using the assessment process the user will get the notification accordingly for <b>“Jobs &amp; Skills”</b> .
03	Novelty / Uniqueness	By uploading the user info in the portal of the application the user can get the required job recommendations as prioritized way.
04	Social impact /Customer Satisfaction	Application has the responsive user interface that allows the user to understand application search process effectively.
05	Business Model (Revenue Model)	<ul style="list-style-type: none"> <li>Made publicly available a new dataset formed by a set of job seekers profiles and a set of job vacancies collected from different job search engine sites.</li> <li>This also helps the industries to find out the users as his employees easily.</li> </ul>
06	Scalability of the solution	Here a seeker looks up for the job he would find relevant to him and apply for it. As there are many job boards, applicants tend to use the tool that provides better services to them, services such as writing a CV, creating a job profile, and recommending new jobs to a job seeker
